

Steps were the currency

Optimizer steps in the 30-minute charged budget, from the cold chip rehearsal of each upload. The letter above each bar is the chip it ran on.

Source: results/official-scores.csv (uploads with a rehearsal; K36 has no step count). Chips differ by up to 3.5% in step time, so compare step counts within a chip.

F2-K15 used a 131k batch and K24 onward a 262k batch; from K50 the batch warms up through smaller phases, which adds steps early in the run.
